

Progress in Engineering and Science

C+CA Progress in Engineering and Science is a multidisciplinary journal publishing cutting edge experimental and theoretical studies across a wide range of engineering disciplines bridging together both fundamental science and novel technological developments and applications through an interdisciplinary approach to physics, chemistry and biology enabled by latest achievements in computational tools, in advanced materials and in nanotechnology. In addition to publishing results of significant importance within the broad spectrum of modern engineering technologies, matter dealing with general aspects of management of science and engineering is also subject of publication.
